

## Splice View Workspace

The Splice View Workspace provides a simplified, pictorial summary of connections between sheath segments. Sheaths, sheath segments, spans, structures, routes, and route segments can be sent to the workspace to be displayed. Connections between sheath segments are displayed as link boxes. The connection status is illustrated by the color of the box. The Legend view lists the various colors and their meanings which allows the user to quickly identify those connections that are "Spliced", "Not Connected" or "Pass-Thru" as shown in the below boxed-in area. The legend is customizable to reflect the status (nomenclature, etc.) and colors used/desired by the Customer. An Expand and/or Collapse view feature allows the user to control the amount of detail displayed.
